

CONTENTS

Introduction	
<i>Carlos M. Duarte</i>	11
References	15
 1. General Aspects Concerning Marine and Terrestrial Biodiversity	
<i>Damià Jaume and Carlos M. Duarte</i>	17
1.1. Introduction	19
1.2. A comparison of biodiversity on land and sea	20
1.3. Biodiversity at the deep-sea floor	25
Acknowledgements	29
References	30
 2. The Magnitude of Marine Biodiversity	
<i>Philippe Bouchet</i>	31
2.1. How many marine species are currently described?	34
2.2. What is the current rate of progress in inventorying marine biodiversity?	41
2.3. Can we predict the global magnitude of marine biodiversity?	48
2.3.1. Microbial diversity	49
2.3.2. Symbionts	51
2.3.3. Extrapolations from samples	52
2.3.4. Extrapolations from known faunas and regions	55
2.3.5. Approaches using ecological criteria	56
2.3.6. Censusing taxonomists' views	58
2.4. Epilogue	58
Acknowledgements	59
References	60
 3. Deep-Sea Ecosystems: Pristine Biodiversity Reservoir and Technological Challenges	
<i>Eva Ramírez Llodra and David S.M. Billett</i>	63
3.1. Introduction	65
3.2. History of deep-sea exploration: from Forbes' "Azoic Zone" to hydrothermal vent discovery	66

3.3. Deep-sea ecosystems: environmental characteristics and biodiversity ..	68
3.3.1. Heterotrophic ecosystems	68
3.3.1.1. Sediment margins	68
3.3.1.2. Canyons	69
3.3.1.3. Deep-water corals	70
3.3.1.4. Seamounts	71
3.3.1.5. Anoxic areas	72
3.3.1.6. Abyssal plains	73
3.3.2. Chemosynthetic ecosystems	74
3.3.2.1. Hydrothermal vents	74
3.3.2.2. Cold seeps	78
3.3.2.3. Other reducing habitats	79
3.4. Technology and deep-sea exploration	81
3.5. Major European deep-sea research programmes	86
3.5.1. CoML	86
3.5.2. MarBEF	87
3.5.3. HERMES	88
3.6. Management and conservation	88
References	90
 4. Life Suspended in Water: the Plankton	
<i>Geoff Boxshall</i>	93
4.1. Introduction	95
4.2. Key challenges	97
4.2.1. Discovery	97
4.2.1.1. Hotspots	100
4.2.2. Understanding	103
4.2.2.1. The carbon cycle and photosynthesis	104
4.2.2.2. The nitrogen cycle	107
4.2.2.3. Drivers of change: detecting and monitoring change ..	109
4.2.3. Prediction	112
4.3. Summary	114
References	115
 5. Marine Genomics and the Exploration of Marine Biodiversity	
<i>J. Mark Cock, Delphine Scornet, Susana Coelho, Bénédicte Charrier,</i> <i>Catherine Boyen and Akira F. Peters</i>	117
5.1. Introduction	119
5.2. Genomic programmes and marine biology	120
5.3. Genomic models for marine biology: the need for model organisms distributed across the tree of life	122
5.4. The Marine Genomics Europe Network of Excellence	128
5.5. Model organisms as a means to apply genomic methods to marine questions	131
5.6. <i>Ectocarpus siliculosus</i> : a model organism for the brown algae	132

5.7. The <i>Ectocarpus</i> genome project and coastal biodiversity	134
5.8. Additional emerging and future genomic model organisms for marine biosystems	136
5.9. Conclusion	138
Acknowledgements	138
References	139
List of Photos and Credits	145
List of Illustrations	149
